## **WATER WORKING GROUP WEB SITE CONTENT UPDATE**

### **INTRODUCTION**

The mission of the Regional Carbon Sequestration Partnership (RCSP) Water Working Group (WWG) is to address stakeholder concerns regarding emerging carbon capture and storage (CCS) technology and potential interactions with local and regional water resources. In order to more effectively engage stakeholder groups and address stakeholder concerns, the WWG has developed a Web site that is hosted on the National Energy Technology Laboratory's Web site as part of the Carbon Dioxide Storage Program description.

### **WWG WEB SITE CONTENT UPDATE**

Updates between June 1, 2014, and May 31, 2016, were minimal:

- Text on the "Water and CCS" page was revised to be more concise.
- The presentation from the August 2015 WWG Annual Meeting was uploaded.
- The fourth fact sheet in a series of WWG fact sheets was added, entitled "Long-Term Protection of Freshwater Resources Following CO<sub>2</sub> Storage."

### **FUTURE WORK**

As new works are produced or made available by the WWG or its members, the material will be added to the WWG Web site and noted in the next update in May 2017. Likewise, any revisions to the current content will be noted in the update as well.

Currently, the WWG is working on a virtual special issue of the *International Journal of Greenhouse Gas Control*. When this virtual special issue is completed later this year, the link to the issue and a brief description of the effort will be added to the WWG Web site.
